

# Egg

# Parachute

## *Supplies Needed for the Science Experiment:*

- Plastic egg halves
- Large plastic straws
- Narrow bendy straws (Connector)
- Popsicle sticks (Connector)
- Wooden ice cream spoons (Connector)
- Wood chopsticks (Connector)
- Coffee Filters
- Masking tape

## *Putting the Egg Parachutes together:*

1. After deciding which connectors to use, start building.
2. The two matching connectors were taped inside each of the plastic egg halves.
3. Then add tape that crossed from the inside of the egg to the outside around each connector to make sure it stayed in place.
4. Then a ring of tape was added to the outside of each of the eggs to hold the outside edges of the crisscrosses in place.
5. Then tape the connectors to the outside of a coffee filter.
6. To add another variable you could have taped a connector to the inside of the coffee filter.
7. Then let the parachute fly.
